DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18 and 20-28, are drawn to a method of selecting phage that encode a target binding protein using a single target, classified in class 435, subclass DIG. 4.
- II. Claims 19, is drawn to a method of selecting a phage that encode a binding protein comprising using a first and a second target, classified in class 435, subclass DIG. 4.

The inventions are distinct, each from the other because of the following reasons:

Groups I and II are directed to different methods. The methods are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, Groups I and II each have different method steps with different outcomes, are not obvious variants of each other, and have a different mode of operation. For example, the method steps of Group I rely on a single first target used in two steps, wherein the invention of Group II relies on two different targets at two different stages of the method.

Further, these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), and have divergent subject matter that results in a substantial burden for the search and examination of more than a single invention; accordingly, restriction for examination purposes as indicated is proper.

Applicant is advised that in order for the reply to this requirement to be complete, the reply must include an election of the invention to be examined even though the requirement be traversed (37 CFR § 1.43). Because the above restriction/election requirement is complex, a telephone call to Applicant to request an oral election was not made. See MPEP § 812.01.

Correction of Inventorship

Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Time for Reply

Applicant is reminded that 1-month (not less than 30 days) shortened statutory period will be set for reply when a written requirement is made without an action on the merits. This period may be extended under the provisions of 37 CFR 1.136(a). Such action will not be an "action on the merits" for purposes of the second action final program. M.P.E.P. § 809.02(a).

Conclusions

If Applicants should amend the claims, a complete and responsive reply will clearly identify where support can be found in the disclosure for each amendment. Applicants should point to the page and line numbers of the application corresponding to each amendment, and provide any statements that might help to identify support for the claimed invention (*e.g.*, if the amendment is not supported *in ipsius verbis*, clarification on the record may be helpful). Should Applicants present new claims, Applicants should clearly identify where support can be found in the disclosure.
